### Student Expectations and Responsibilities:

- Undertaking a PhD is a personal endeavor.
- We uphold research freedom as a fundamental principle, with no set requirements for working or resting hours.
- Attendance at weekly one-on-one meetings with me is mandatory. Reports may be formatted freely but must adhere to standard content guidelines.
- Engage in active discussions within the group or subgroup chat and get familiar with shared papers and projects.
- Send the full draft to me at least 7 days prior to the submission deadline.
- Drafting funding proposals is not expected from PhDs, Masters, or Bachelors; the program is pure research-based.
- Actively participate in international conferences to foster connections, and consider organizing or attending international tutorials and workshops.
- The final PhD thesis need not be publication-based, and there are no requirements regarding the quantity of papers for graduation. Quality is more important than quantity.
- Pursue internships in industry (e.g., NV, MS, Meta) or visits to internationally renowned institutions, while adhering to internship policies.
- Students are expected to graduate as early as possible.
